

GCBAA MEMBERS CONVERGE ON NEBRASKA FOR NEW *18-Hole Project*

Homer, Nebraska – Population 502; a short 2-hour drive from the GCBAA Executive Office in Lincoln is bringing together familiar faces of our association. On June 17th, GCBAA staff joined fellow GCBAA Members; Chris Daigle, Scot Leavitt, and Matt Faherty of Winterberry Irrigation, LLC (Irrigation Contractor), Doug Zak of CMF Global (Supplier). The design build project with friends Tad King and Rob Collins with King Collins Golf Course Design.

Chris gave us the tour of the site showing their HDPE process, along with best management practices Winterberry Irrigation, LLC implements in their daily work activity. From a morning stretch, safety meeting, social distancing of crews, and professional and organized workspace; despite being busy in the CMF Global trademark AquaFusion training certification program review with employees. Around the jobsite, there were countless organized piles of GCBAA member products ready to be installed. Miles of Regency Wire & Cable, ADS Inc. drainage, and AquaFuse HDPE piping system, along with the smell of diesel from the fleet of Caterpillar Equipment being used. There are storage containers of Toro Irrigation Company irrigation heads that are ready to be installed after Erik Christiansen with EC Design Group Ltd. stakes the property.
